The Risky Business of Information Sharing: Why You Need to Care about Copyright
It’s easy—and costly—to run afoul of copyright in the Internet age. But if technology has escalated infringement, it has also brought new solutions that make it simple to comply with copyright law and still embrace the sharing that is the digital workplace’s most valued asset.

The action was simple enough: one senior executive regularly forwarded copies of digital material to two other executives. It’s the kind of routine, rapid-fire information swapping that’s done on the fly every day in offices. The tab, though, was anything but common. To settle the resulting copyright infringement lawsuit, the executives’ employer paid $500,000.

Copyright is an essential tool in the spread of new ideas, and the workplace has become ground zero for infringement. Ask employees up and down the corporate hierarchy, and they’ll tell you that sharing information electronically with co-workers is integral to their jobs. Their employers will emphatically agree.

But unauthorized swaps of information also carry enormous potential risk: Ordinary office exchanges, so natural to the digital world, can easily violate the copyright rights of others and bring costly lawsuits or settlements. Now the same technology that has dramatically defined the Internet age is drawing a new roadmap to compliance, with software tools that simplify adherence to copyright requirements.
Copyright law encourages resourcefulness and originality while protecting creative output. The idea behind it is to grant ownership of the creative aspects of original works to the individuals and businesses that create them. Any original work of expression written, recorded, or captured in some fashion is protected by copyright. That includes art, music, and literature, as well as research, news, blogs, and e-books. The U.S. Copyright Office handles the registration of 550,000 copyright claims annually and this is only a small portion of the works that copyright protects.

With its ability to whisk information through cyberspace at the click of a key, the Internet, like copyright, is at the heart of new thoughts and ideas. In many ways, it’s the perfect union, pairing fresh creativity with an engine for global transmission. The result is that access to vast stores of information has become nearly universal: Everyone has access. No longer reliant on corporate librarians to secure information, employees are sharing data whenever and wherever they want.

Copyright creates a form of ownership in original creative works and the law protects the works by giving exclusive rights, which can then be enforced by the copyright holder, including through lawsuits. So any time employees share content, there’s risk—potentially substantial legal and financial exposure—but ethical as well. In many cases, companies have a greater stake in copyright beyond observing protections for the works of others. They, too, have intellectual property they seek to protect and an interest in the application of a form of the Golden Rule: respect others’ intellectual property as you would have them respect yours. Even if they don’t create any new works or ideas of their own, systematically disregarding copyright requirements contradicts the values that are integral to most corporate missions. Observes Chris Gannon, vice president and general counsel for Blue Cross & Blue Shield of Vermont, “You can’t say that integrity is a core value and then be a scofflaw on copyright infringement.”

The realities of how employees use information

Corporate employees are sharing content more frequently than just five years ago with executives the most prolific of content sharers and consumers. Email remains the primary vehicle for sharing. A whopping 87% of employees use email to send content by attaching documents, according to an extensive study conducted in February 2013 by research and advisory firm Otsell, Inc. According to Otsell’s research, more than two-thirds of surveyed knowledge workers include links to content in emails and nearly half actually cut-and-paste content directly into e-mails. As Otsell points out in the report highlighting its findings, sending a link is often in compliance with the obligations created by copyright law, while attaching documents or cutting and pasting often is not — but the distinction appears lost on users.
Outsell finds other distinctions are lost, too. One is the difference between free information and freely shareable information. Sixty-five percent of respondents say they believe information they obtain online or in print at no charge can be shared without permission. In most cases, it can’t. When content is paid for, restrictions are more obvious to respondents: 68% of executives surveyed believe that it is okay to share free digital print information with others within their organizations and 45% believe that it is okay to share paid digital and print information. It usually isn’t.

According to Outsell’s research, 77% of respondents believe their organization is taking appropriate measures to ensure compliance. But 40% still say that copyright is not top of mind during their work day, indicating a gap between perceptions of personal and corporate responsibility.

That may be why information managers say copyright is more important than it was a year ago, according to a survey by U.K. publisher FreePint (see chart on page 6, “Interest in Copyright Is on the Rise”). No doubt one factor boosting awareness is the spate of copyright-related news stories. “Prominent copyright news stories raise the issue to the forefront and cause some people to change their actions,” agrees R. David Donoghue, an intellectual property litigator for Holland & Knight and author of the Chicago IP Litigation Blog.

“You can’t say that integrity is a core value and then be a scofflaw on copyright infringement.”

Observes Chris Gannon, vice president and general counsel for Blue Cross & Blue Shield of Vermont

“*But the bigger copyright issue is the incidental or unintentional infringement, such as an engineer who needs a few chapters from a textbook. That kind of copying is so prevalent that companies can’t rely on cautionary news reports to inform employees, says Donoghue. Responsibility for educating them, he adds, rests with employers and their employees (see sidebar on page 2, “What’s Protected by Copyright?”)."
Taking responsibility for compliance

So how does a company reach all of the employees it needs to about copyright? An important first step is taking responsibility to educate employees about compliance and then putting protections in place (see sidebar on page 5, “How to Create a Compliance Policy”).

For many employers, that process begins by acknowledging that unauthorized use of copyrighted materials could cost them big bucks. Multimillion-dollar infringement lawsuits are a genuine risk.

Managers regularly shrug off infringement risks in the mistaken belief that, if caught, their employers face only modest settlement costs. They assume typical settlement payouts total relatively small sums, such as three times subscription costs, or that purchasing additional subscriptions will bring them into compliance.

Not true. The tab for infringement has risen dramatically. In 2003, publisher Lowry’s Reports Inc. won a $20-million jury award against investment firm Legg Mason for systematically faxing copies of a daily and weekly newsletter published by Lowry’s.

The case and its substantial award motivated more than a few corporate counsel and librarians to sharpen their companies’ observance of copyright requirements. That’s a smart strategy, because copyright infringement lawsuits are on the rise, with many being settled quietly and out of the headlines. But, still, within the hallways of many companies, awareness of copyright often remains limited and casual.

“When I tell them they’re talking about statutory damages and exposure to millions of dollars in judgments, they express great surprise,” says Thomas Kirby, a senior litigation partner at law firm Wiley Rein LLP in Washington, DC, who frequently represents publishing companies.

But not for long, says Kirby, who represented Lowry’s Reports in its suit against Legg Mason. “There’s an increasing recognition among copyright specialist lawyers that a company that gets caught forwarding or otherwise infringing publications has a serious problem and should expect some pretty serious consequences.”
When sharing information, size matters

While much attention has been focused on large companies’ information habits, Outsell’s survey found not-so-big companies to be even more active traders of content. Within smaller-sized companies (250–999 employees), the number of times per week that employees forward information has increased 55% since 2007. Employees at smaller sized companies say they are significantly more likely to share mission- and time-critical information than they were six years ago. Additionally, the circle of sharing is widening. Outsell’s study found that slightly more than a quarter of respondents indicated that they regularly share information on a daily or weekly basis outside their company walls with clients, business partners and contractors. Smaller organizations are significantly more likely to share information outside of their organizations than medium and larger companies.

Larger companies behave in a similar pattern, sharing frequently and to an even larger audience. Collaboration tools, whether on-site or cloud-based, are increasingly finding their way into corporate workflow regardless of company size with larger companies utilizing more formal systems. Increasingly, organizations of all sizes are sharing in more formats, in more sizes and to more individuals.

Managing compliance

When it comes to managing copyright compliance, a major hurdle — and potential risk — is employees’ perception that obtaining permission is a cumbersome process that interferes with their ability to do their jobs.

Fewer than half of knowledge workers believe copyright permission is easy to obtain in their organizations, according to Outsell’s research. Most are either ambivalent about the efficiency with which they're granted permission, or they disagree that the process is convenient. Their impressions are largely accurate: the outreach and phone calls required to garner permission can absorb hours of work over the course of several days.

Outsell isn't surprised by the survey’s finding that busy employees and managers take a dim view of compliance procedures. “It speaks to the breadth of items on any knowledge worker’s mind today,” says Outsell. “We’re all doing more with less, and we’re moving faster.”

Outsell points out that publishers convey mixed messages to website visitors by routinely accompanying articles with multiple sharing options, such as allowing readers to email links and to post article-related comments on Facebook and social news websites like Digg and Newsvine. “Certainly it seems fine to share if everyone is enabling it,” Outsell’s advice? Education is critical.

So far, the education isn’t occurring, especially within corporations. Outsell found that while most employees know their companies have copyright policies, they don’t know how they work (see chart, “How Does That Copyright Policy Work Again?”). Nearly two-thirds (63%) are aware that their organization has a copyright policy. But the fact that 32% say they aren’t sure of the policy’s details and that 19% are not aware if their organization has a copyright policy underscores the need for companies to provide mechanisms that facilitate compliance.

How to Create a Compliance Policy

The following 10 steps will help craft a policy that meets your company’s needs and decreases your risk of infringement.

1. Tap your organization for input. Helpful suggestions for issues to address in your policy can come from a variety of departments. In addition to legal, compliance, and library/information services, expand the policy team to include IT, marketing and corporate communications.

2. Establish your policy objective. Be clear on why your organization is implementing a copyright policy. Maybe the goal is for your company to fulfill its obligations under copyright law. Perhaps it is to provide employees with a uniform approach to addressing copyright issues. Whatever the reason, state it concisely.

3. Define copyright. Explanations of copyright law and what it covers don’t have to be complex. Be sure your policy includes concise definitions and examples of information that is and, equally important, is not copyright-protected.

4. Demystify “fair use.” Fair use’s premise — to allow limited use of copyrighted material without permission — is often misunderstood. Be sure your policy includes details on the factors to be considered when deciding whether a particular use is a fair use, and your organization’s policies for balancing fair use and copyright holders’ rights. Educate employees about the fair use of your company’s own copyrighted materials, and prepare them to address the issue with customers, vendors, or competitors.

5. Address international copyright issues. If your organization employs workers in multiple countries, provide information to ensure they comply with the copyright laws of the country in which they are based.

<< continued from previous page

6. Clarify copyright’s reach across formats. When it comes to copyright, pixels are as protected as paper. Be sure your policy clearly explains that copyright covers content across multiple formats. Employees are often surprised to find out that an article is copyright-protected whether it’s in a newspaper, electronic newsletter, website or blog.

7. Outline compliance procedures. Identify who is responsible for answering compliance questions within your company. Explain the steps employees should take to determine if copyright permission is needed and to request or secure permissions.

8. Create guidelines for the use of your organization’s copyrighted materials. How should employees handle the issue of works for hire with contractors and other non-employees who produce work for the organization? When is it okay to distribute your organization’s own materials?

9. Advise on proper handling of infringement. Encourage employees to do the right thing, and to follow specific procedures when they witness instances of copyright infringement within your organization. Outline the steps they should take if they encounter your company’s works infringed on the Internet or in the marketplace.

10. Once you have a copyright policy, promote it. Many corporate copyright policies are too low profile to be useful, largely unread and squirreled away in manuals and on hard drives. Post yours on the corporate intranet or other shared sites where colleagues can easily find it. Issue periodic reminders company-wide.

INTEREST IN COPYRIGHT IS ON THE RISE
Information managers say copyright is more important than it was a year ago, and here are the reasons why:

- Growing cost of content requires more attention to managing the risks associated with acquiring and using content
- Proliferation of new types of content, particularly digital content
- Introduction of new laws and regulations applicable to copyright
- High-profile infringement cases
- Increase of contracting work to third-parties, necessitating the creation of copyright-related policies for working with them

Scared straight
Make no mistake: Most employees want to avoid infringing. Employees of different ages take somewhat different approaches to copyright — with seasoned employees in general more aware of their copyright obligations, and younger ones less familiar — but their actions share a common thread. “Most people want to follow the law,” says attorney Donoghue of Holland & Knight. Employees “become frightened when they realize there’s something they’re doing that’s creating liability, and they always want to fix it because they didn’t mean to do it. In this digital culture, they didn’t realize it was infringement.”

It’s true that under-30 employees have more of a sense that all information is free and shareable, Donoghue adds, “yet that group is no less willing to change their behavior when it’s pointed out that copyright law may prohibit some of the sharing.”

Interestingly, a far more immovable force resides in executive suites, especially those of sizable corporations. “In large companies, we often find that the infringer is not a low-level, uninformed employee but instead a high-level executive who views himself as immune to the policies everyone else is expected to follow,” says attorney Kirby of Wiley Rein.
Making compliance easy

Subscriptions and publishing agreements are helpful but limited. Some publishers sell licenses that let employees share articles within their companies from specific periodicals, journals, or newsletters. They permit employees to swap information without infringing on their copyrights.

Broader protections come from Copyright Clearance Center’s Annual Copyright License. The Annual Copyright License facilitates compliance, freeing employees to do their jobs and share information with colleagues no matter where they are located without running afoul of copyright law. The license furnishes rights to millions of titles and covers research and industry news as well as blogs, newspapers, e-books and more. It’s a risk mitigation tool for the digital age, letting employees make the most of the advantages of the Internet while still respecting copyright. With it, employees can:

- E-mail online articles to fellow employees and coworkers
- Distribute copies of published articles at internal meetings
- Post excerpts of industry research on corporate intranet sites
- Print and copy published articles to share with company colleagues
- Download content for use at company meetings
- Include published material with regulatory submissions to government agencies

The Annual Copyright License also includes RightFind™ Advisor, CCC’s complementary rights lookup tool, which enables employees to quickly confirm whether they can share specific content based on the rights included in the license.

In addition to licensing, CCC provides educational resources for today’s professionals to help build copyright awareness throughout their organizations. The OnCopyright Education team offers instructor-led programs incorporating group discussions, question and answer sessions, and analysis of real-world scenarios. CCC’s OnCopyright Education Certificate Program, developed for business and academic professionals who deal with copyright issues on a day-to-day basis, features industry-specific courses that target a variety of user communities and the challenges they face in managing copyright.

Sharing is the strength of the digital age, and copyrighted works are the fuel for its collaborative engine. With the right tools, companies can thrive in this new era and grow their way to greater profits.

How Can We Help You?

Thousands of companies depend on Copyright Clearance Center (CCC) for licensing solutions and copyright education resources. We can help you simplify copyright compliance at your company. Contact CCC at +1-978.750.8400, option 3, or visit www.copyright.com/acl.
